MODULA SYSTEM

Modula is a system of open elements that sit on worktops, available in three different configurations.

Heights and widths can be adapted to suit any situation, even with end and intermediate panels, always guaranteeing correct alignment. The system can be completed with the Modula Toolbar LED bar and with a series of accessories that either fit into the inside of the storage units or onto the bars themselves, expanding possible use options and organisation of space. The system modules are designed to be wall mounted.

1 Body and rail

In aluminium with an iris, pewter, or bronze finish
NOTE: for models ≥ 750 mm in width, the rail has a rod halfway along to increase its stability and reduce possible bending.

2 Back panel and shelves

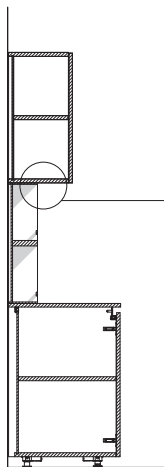

Matt lacquer, wood, premium wood finish
(Scotch Brite stainless steel available only for the version without shelf behind hob)

3 Equipped bar

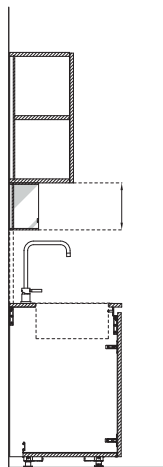

The bar is optional and is also available with 2700°K LED light.
Can either be wall mounted or fitted inside units
Molteni&C kitchens

4 Suspended modules and accessories

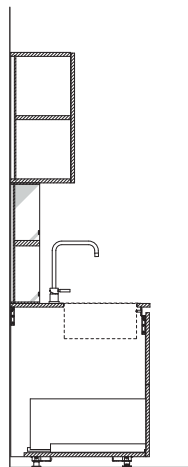

Structure in aluminium with pewter finish and inserts in natural oak (see dedicated section for more info)

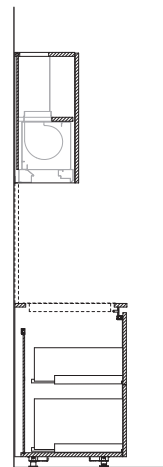

On base unit
D 595 mm

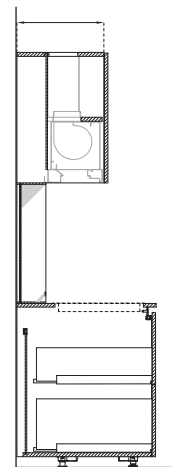

With sink on base
D 595 mm.
The open modules
can be reduced in
height to a minimum
of 150 mm

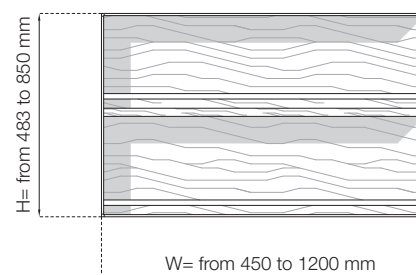

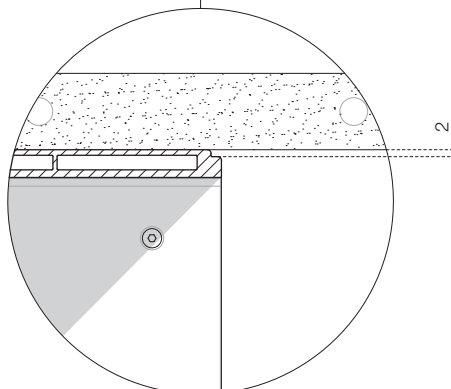

With sink on base unit
D 745 mm

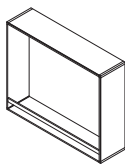

Modula storage units
cannot be used with hob
on base D 595 mm

With hob on base
D 745 mm use the
module without shelves,
with Scotch Brite
stainless steel back
panel and increase the
depth of the side panels
on the units to a depth of
472 mm.

MODULA TOOLBAR

Modula Toolbar can either be wall mounted or fitted inside units from the Molteni&C kitchens collection and it has a series of accessories that can be hung on it. The LED light (2700°K) is optional and can either be remote- or switch-operated.

The bar and part of the accessory range come in the iris, pewter and bronze finishes; while the other accessories are only available in pewter with inserts in natural oak.

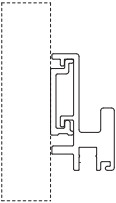

For aesthetic reasons, if the bar is installed inside the open Physis end elements and inside the Modula system elements, it is 150 mm less wide than the total measurement of the unit itself: consider the price for the resulting measurement.

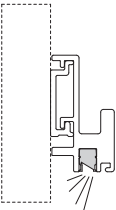

If applied to the inside of other modules in the collection, the total width of the bar is the same as the inside of the unit (-2mm).

PRICE CATEGORIES FOR FRONTS AND WORKTOP FINISHES

The number shown inside the boxes identifies the price category.
Grey boxes without a number indicate that the material is available for that front, but no price category has been assigned to it.
The photographs included in this price list, and the finish samples supplied by Molteni&C Kitchens Collection, are for illustrative purposes only and may vary due to lighting, environmental conditions, and ageing.
In the case of additions or replacements, uniformity of grain pattern and colour tone cannot be guaranteed.

- ★ Wood veneer with vertical grain (horizontal grain available at an additional charge of 135 points per module).
WARNING: The wood veneer doors of the Intersection kitchen with inlays are produced using a special surface sandblasting technique.
- ★★ As a result, they have a different appearance compared to wood veneer doors without inlays, which are sanded instead.

PRICE CATEGORIES FOR FRONTS AND WORKTOP FINISHES

The maximum achievable length varies depending on several factors, including the required thickness, finish, type of material, slab availability, and the position of cut-outs and joints.

As a general rule, and especially for worktops with a thickness of 12 mm or 20 mm, feasibility will be assessed on a case-by-case basis.

Molteni&C's Technical Department reserves the right to make any design modifications deemed necessary.

It is essential that the handling of worktops is carried out with the utmost care and only by experienced personnel.

Book-matching processing is subject to the intrinsic characteristics of the slab and the final aesthetic result.

To ensure our standards of excellence, Molteni&C will assess each configuration according to the dimensions and symmetry of the modules, ensuring the most harmonious result through the most suitable technical solution, whether continuous veining or book-matching.

The maximum length applies to worktops, backsplashes and upstands.

TECHNOPOLYMER SURFACES

The doors are made using particleboard or MDF panels, depending on the selected kitchen model, onto which a technopolymer sheet is applied and edged in the same material.

Technopolymer is a synthetic material, often used also in the food sector.

100% recyclable, it maintains high performance even during recycling processes.

It does not emit toxic substances into the environment and is a completely hygienic material.

The grain direction is always vertical.

PT002
COSMIC LIGHT

PT003
COSMIC DARK

WOOD SURFACES

STANDARD DOORS

The doors are made of wood chipboard or MDF depending on the model, and veneered in the woods in the range with coloured edges.

The door veneer is produced to ensure a continuous grain across the fronts.

Since this is a natural material, it is not possible to determine a fixed length for the grain, so for kitchens that are very wide, the grain will be interrupted and may vary based on the raw material.

The grain is always oriented horizontally, except for Indada, Prime, Intersection, Ratio and Physis with standard faces, which always have vertical grain (horizontal with supplementary cost).

INTERSECTION DOORS WITH MARQUETRY

The sheets are inlaid and applied to a panel of black MDF, which is then edged and sanded.

The panels are milled to a depth of 1 mm, letting the black MDF breathe along the inlay joints.

Following this, a protective transparent matt layer is applied to the surface.

With the sanding process, the inlaid doors of Intersection have a different surface effect than the standard doors, which are instead polished. Standard doors imply all wood doors that do not involve surface milling, therefore including base units, wall units, columns, upper cabinets, and common elements.

Customisation of the finish:

%

- The supplementary charge will be based on the required finish and composition
- Please contact the Molteni&C Kitchens Sales Office
- For colour variations, glossy polyester lacquered finish and wood sample, a physical sample must be sent to Molteni&C Kitchens Division for technical approval
- Molteni&C reserves the right to not proceed with production if the potential result does not meet its quality standards

ES63
AMBER

SURFACES IN RAYS

Applicable to all woods in the range (NO hinoki, NO light elm, NO dark elm).

For the price category, refer to the table of front piece finishes.

The doors are made of black MDF panels, which are veneered in the woods in the range with stained edges. To obtain the particular texture, the outer surface is worked with a pantograph, which allows the underlying material to show through, giving the front the distinctive vertical pattern.

The grain is always vertical. The texture pattern is always vertical.

WARNING: The slat is about 5 mm wide. Should nonstandard sizes be requested, the size of the first and/or end slat of the front may change. This should be considered a feature of the finish and not a defect. Therefore, it cannot in any way be considered a point of contention.

NO Intersection

NO Tivoli

NO Pivot Column

NO Rotating Column

NO Technical Column

NO Sistema 7 Door

NO shiny polyester

NO finished sides

Customisation of the finish:

%

GREY BROWN (no stripes)

NATURAL STONE SURFACES

Only available for Intersection; see the special kitchens section.

The doors are made by removing material from the inner surface. The resulting space is filled with an inner frame for support, made of aluminium in pewter finish, which is in turn filled with a lightweight material. Finally, everything is covered with a black panel.

P19
SANTANNE

MDi BY INALCO WORKTOPS

These consist of ceramic clays that are pressed and subject to a curing process at very high temperature. This process, which occurs at more than 1000°C, triggers another process called 'sintering', which binds the material. For this reason, MDi by Inalco worktops are NOT subject to thermal shock. Since they contain no air, they do not absorb any type of liquid and have no problems with acidic foods or limescale removers.

NATURAL STONE WORKTOPS

As with most types of natural stone, Ceppo is particularly sensitive to acids (vinegar, wine, lemon, citrus juices, alcohol, perfume, or products which can corrode the surface and dull the finish). All materials are natural, so no two slabs are alike and any variations in tone, veining or fossil inclusions are nothing but the expression of nature. All worktops in a given kitchen will naturally be made from the same slab or slabs from the same block, considerably reducing the natural variations in the material. For slabs longer than 2400 mm, check with the Molteni&C Kitchens Division Technical Office for feasibility and quotes. Orange inclusions in Billiemi stone are a characteristic of the material itself and therefore are not valid as a point of contention.

SECTIONAL BACK

WARNING: The joint between the back panels is always covered by the shelves, which have a fixed position and CANNOT be moved.
Simple shelves and the wine glass rack cannot be inserted at the joint between sectional back panels.
Compatible only with units D 595 mm.
The height of the back panels varies depending on the height of the column or the base units adjacent to the Atelier columns.
See the introductory table for how to check the height of the central back panel.

- Lower (C) back panel

WORKTOPS

- Two-sided compositions cannot be made
- Worktops cannot be placed at the end
- The material of the adjacent surface must be different from the worktop
- Not compatible with XY System
- The height of the front (H) changes depending on the adjacent worktop
- For aesthetic and design reasons, the extension beyond the adjacent top is always 25 mm

UNDER-TOP INDUCTION HOBS

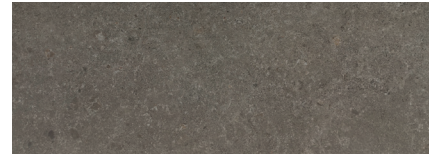

Under-top induction hobs can only be applied to the following MDi Induction by Inalco tops:

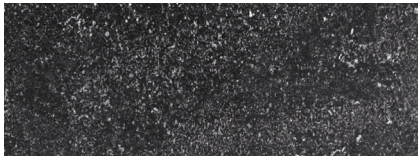

CEI110 - CAT. 1
ANANDA BLANCO DT
MDi Induction by Inalco

CEI190 - CAT. 1
DUNA SUPER BLANCO DT

CEI120 - CAT. 2
METEORA GRIS ABUJARDADO
MDi Induction by Inalco

CEI050 - CAT. 3
VULCANO
MDi Induction by Inalco

ATTENTION:

The surface finishes of MDi Induction by Inalco slabs differ in tone, colour and surface roughness compared to the finishes of standard MDi by Inalco slabs. These two types should not be combined.

The thicknesses and types of compatible ceramic tops are only:

- TH 12 mm (subject to verification by Moltein&C Kitchens Technical Office)
- TH 36 mm Intersection
- TH 48 mm Intersection
- TH 50 mm
- TH 60 mm
- TH 90 mm Ratio

In addition to these, the hobs can also be applied to worktops.

Under-top induction hobs are certified for the EC market only.

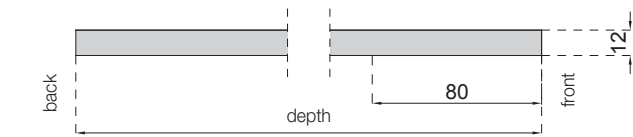

The countries where technical assistance can be provided are listed below:

- Italy
- United Kingdom
- Sweden
- Denmark
- Norway
- Germany
- France
- Spain
- Greece
- Switzerland
- Estonia
- Finland
- Vietnam
- Singapore
- Thailand

For proper maintenance, the work area should be cleaned after each use of the hob. This can be done by wiping with a cloth wet with water and a universal degreaser

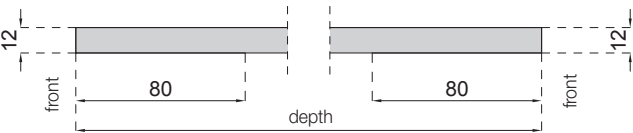

MDi INDUCTION BY INALCO WORKTOPS TH 12 mm

Depth D 331 mm is not intended for flush-mounting the hob. Used to complete compositions with tops in MDi Induction by Inalco finish.

MDi INDUCTION BY INALCO WORKTOPS

Balanced compositions are not possible.
Worktops cannot be placed at the end.
The material of the adjacent top may be different from the worktop material.
Not compatible with Sistema XY.
The height of the front (H) changes depending on the adjacent worktop.
For aesthetic and design reasons, the projection beyond the adjacent top is always 25 mm.

SLANTED TOPS FOR TIVALÌ BY YABU PUSHELBERG

For recessed appliances, calculate the supplementary charges in the Tops chapter of the general price list.

ATTENTION: Not all ceramic materials are available in the 3074 mm width.

The Molteni&C Technical Office will assess the feasibility depending on the material and required recessing.

Do not place hobs under the slanted portion of Tivali by Yabu Pushelberg tops.

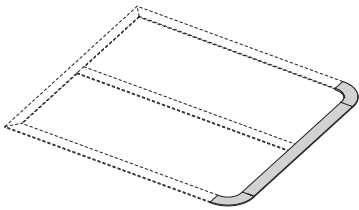

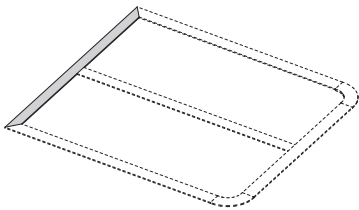

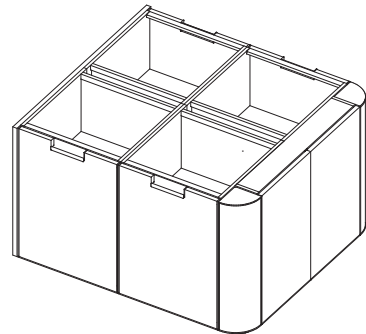

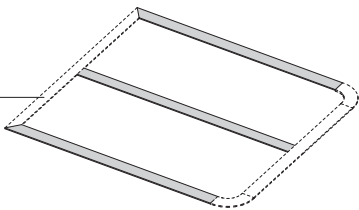

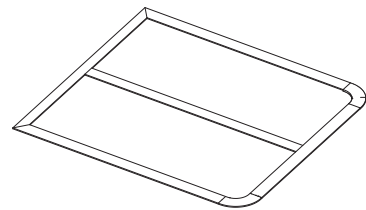

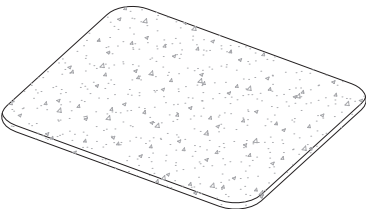

- W = 3074 mm
- The value "P" changes depending on the selected kitchen model:
Prime: 791 mm
Hi-Line 6 / Hi-Line 6 Frame Door: 791 mm
VVD: 791 mm
Intersection: 797 mm

PHYSIS UNDER-TOP PROFILE

This profile must be bought if the worktop is not supplied by Molteni&C.
Otherwise, it is always included in the price of the Physis worktops given in this price list.
To be installed by the Customer

LINEARPROFILE:
Calculate per linear metre.
The price changes according to whether the composition is with an island or against a wall.
There are joins at set distances for linear elements.
Compositions with an island come with another central supporting element.

STRAIGHTSIDE PROFILE:
To be calculated separately, depending on the depth of the composition.

CURVEDSIDE PROFILE:
The price of this profile is always included in the base units underneath.

PHYSIS UNDER-TOP PROFILE

Available in iris, pewter, or bronze finish: please specify when ordering
